

# Sharing Big Data Assets via a Secure Digital Market Place

SAE HM-1 meeting on IVHM / ARP 6904 WG  
Fort Worth, TX Mar 29<sup>th</sup> 2017

Leon Gommans, PhD

Science Officer

Air France – KLM Group IT Technology Office R&D

Guest Researcher, University of Amsterdam FNWI- SNE group.

# Content

Air France - KLM Research Context

Problem: Sharing Big Data Assets across autonomous organizations

Solution Concept: Secure Digital Market Place

Technology: Lightpath and Data Transfer Nodes.

# My role within our ICT Innovation R&D department

## GigaPort

# Researching Big Data Sharing at Air France KLM

Global Scale

Aircraft MRO  
NWO CIMPLO project  
4.5 FTE

Cybersecurity  
NWO COMMIT/  
SARNET project  
3.5 FTE

National Scale

Logistics:  
NWO DaL4LoD project  
(4.5 FTE)  
Blockchain proposal (3.5 FTE)  
NLIP iShare project

Passenger Flows

City / regional Scale

Passenger Experience

Campus / Enterprise Scale

# SAE Use Case based envisaged research collaboration

Funding Agency	 Big Data Hub or Industry initiative funding		 Netherlands Organisation for Scientific Research Topsector Funding	
International Networking	 			
Regional / National Networking				
Local University				 Universiteit Leiden The Netherlands  UNIVERSITEIT VAN AMSTERDAM
Aircraft MRO & OEM				
Industry Standards Body	 SAE AeroSpace Group HM-1 working group Use Case on vibration sensor data			Status May 2016

# Sharing Big Data Assets between different organizations needs:

Clearly defined and agreed common **benefit** (defining the group's identity)

**Common group rules** governing use, access and benefit sharing.

**Organizing trust** amongst group members as **means to reduce risk**

Infrastructure supporting **implementation of trust** whilst ensuring **autonomy**

# Trust as a means to reduce risk

## Risk:

- Compliance
- Liability
- Disclosure
- Ownership
- Intellectual Property
- Additional oversight
- etc., etc...

## Means:

**Trust** and **power** are both means capable of reducing risk

How to organize trust and power? -> **The Secure Digital Market Place concept**

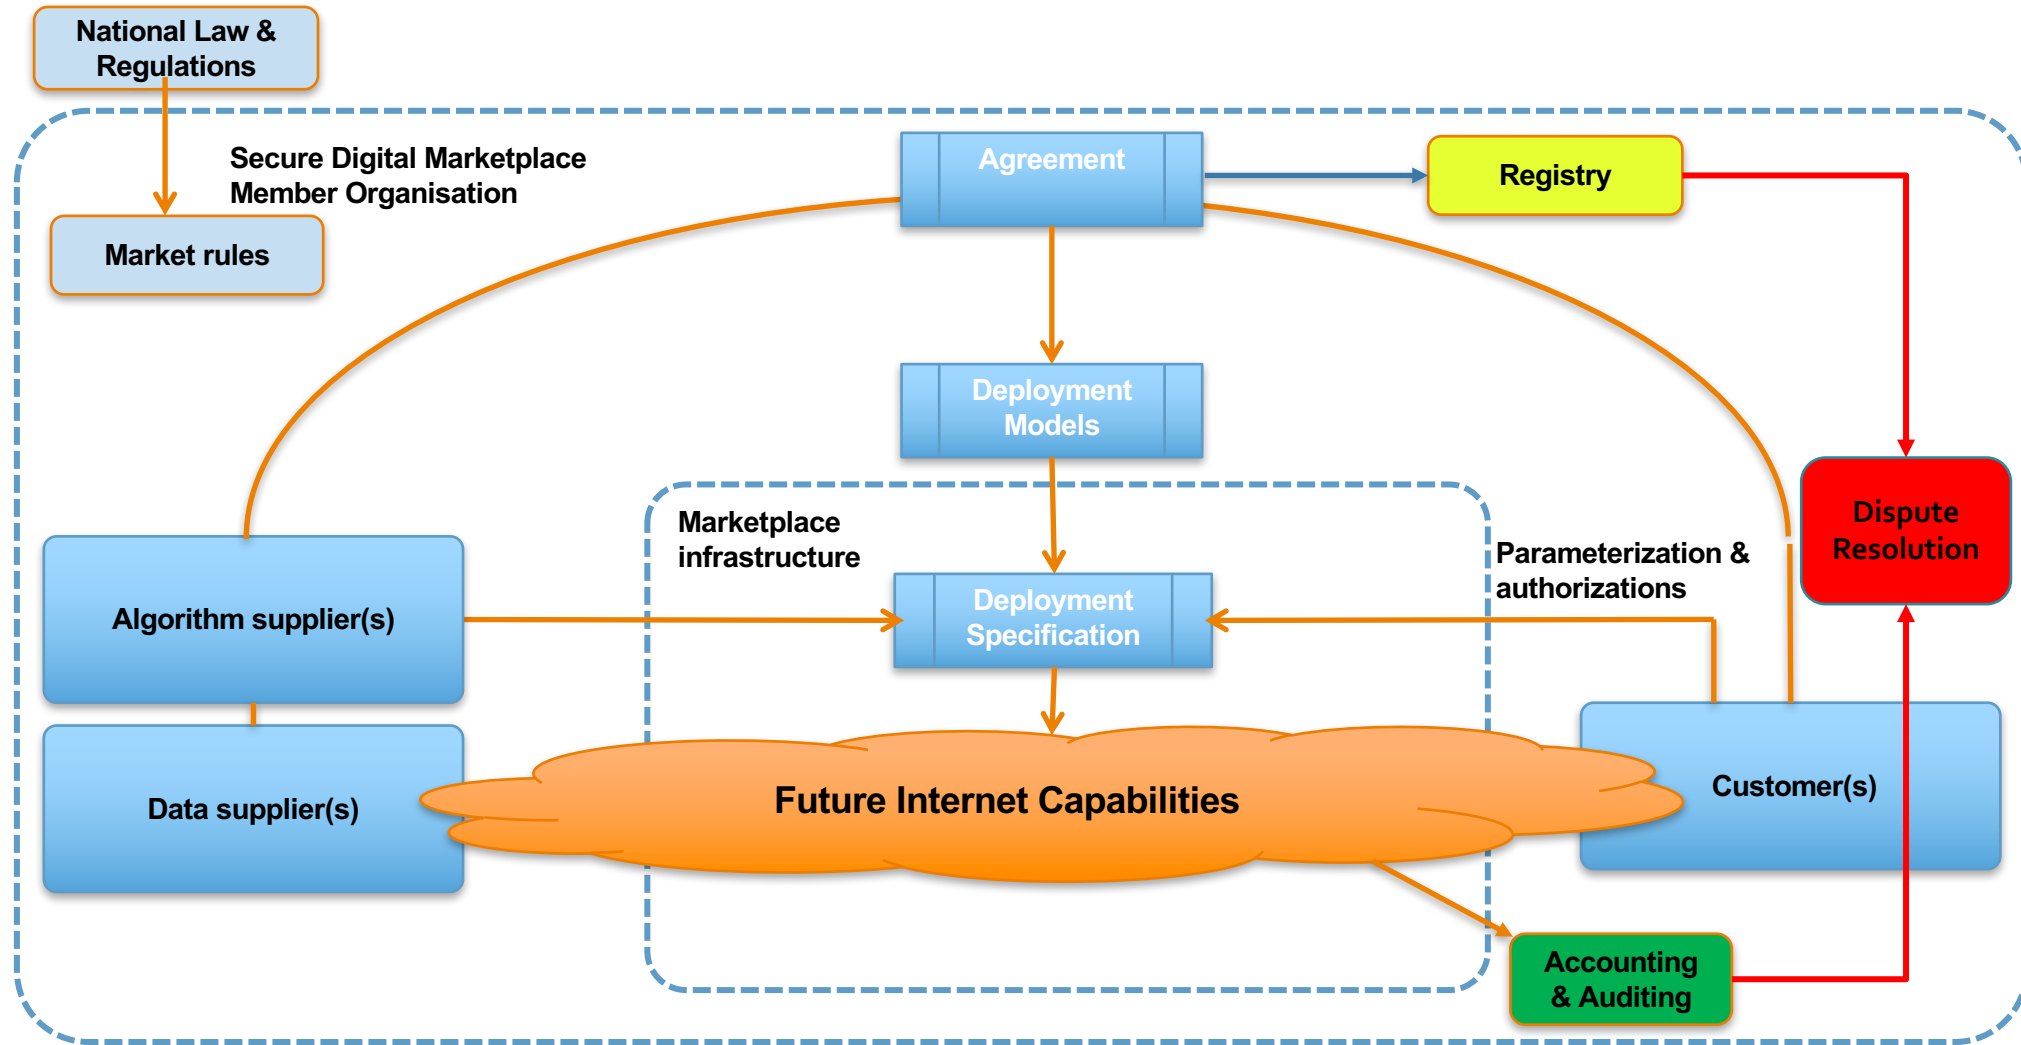

# **Secure Digital Market Place** to create trust allowing data sharing according to member organized **market rules** and subsequent **contracts** between autonomous members.

- Digital Market Place (DMP) is a member organization as **independent legal entity**.
- Goal of the DMP is to **organize trust between members** wanting to gain a particular common benefit no single member can gain on its own.
- Members of the DMP can be supplier or a consumer or both.
- All members have **equal rights** within a DMP
- DMP is **governed by a board of members** in which all members participate
- DMP establishes regulation consisting of **market rules and admission requirements**
- DMP appoints a **market master** in charge of market operations
- DMP establishes regulation for **conflict** settlement
- DMP appoints an **adjudication committee**
- Members can obtain rights (licenses) from the DMP within the framework of the DMP regulation to act in a particular defined market role.
- **What elements of the DMP can be digitized?**

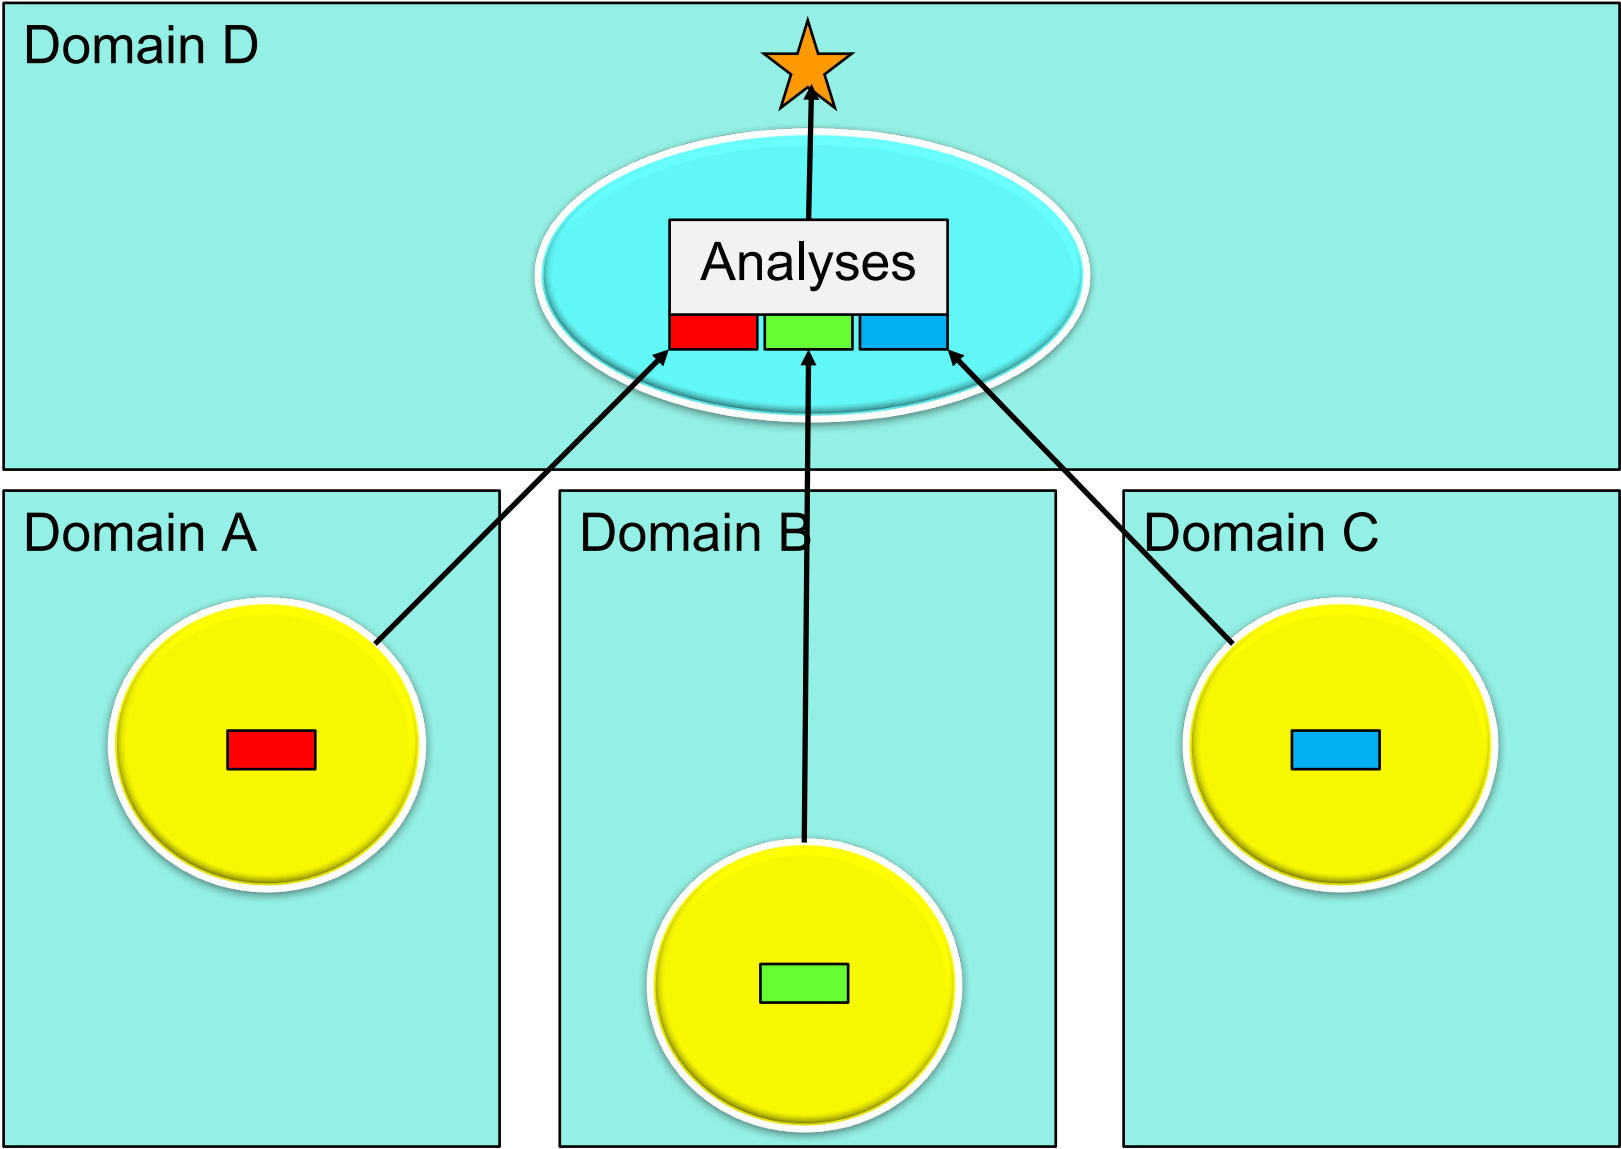

# Secure Digital Market Place architectural sketch

# Traditional Data Sharing deployment model.

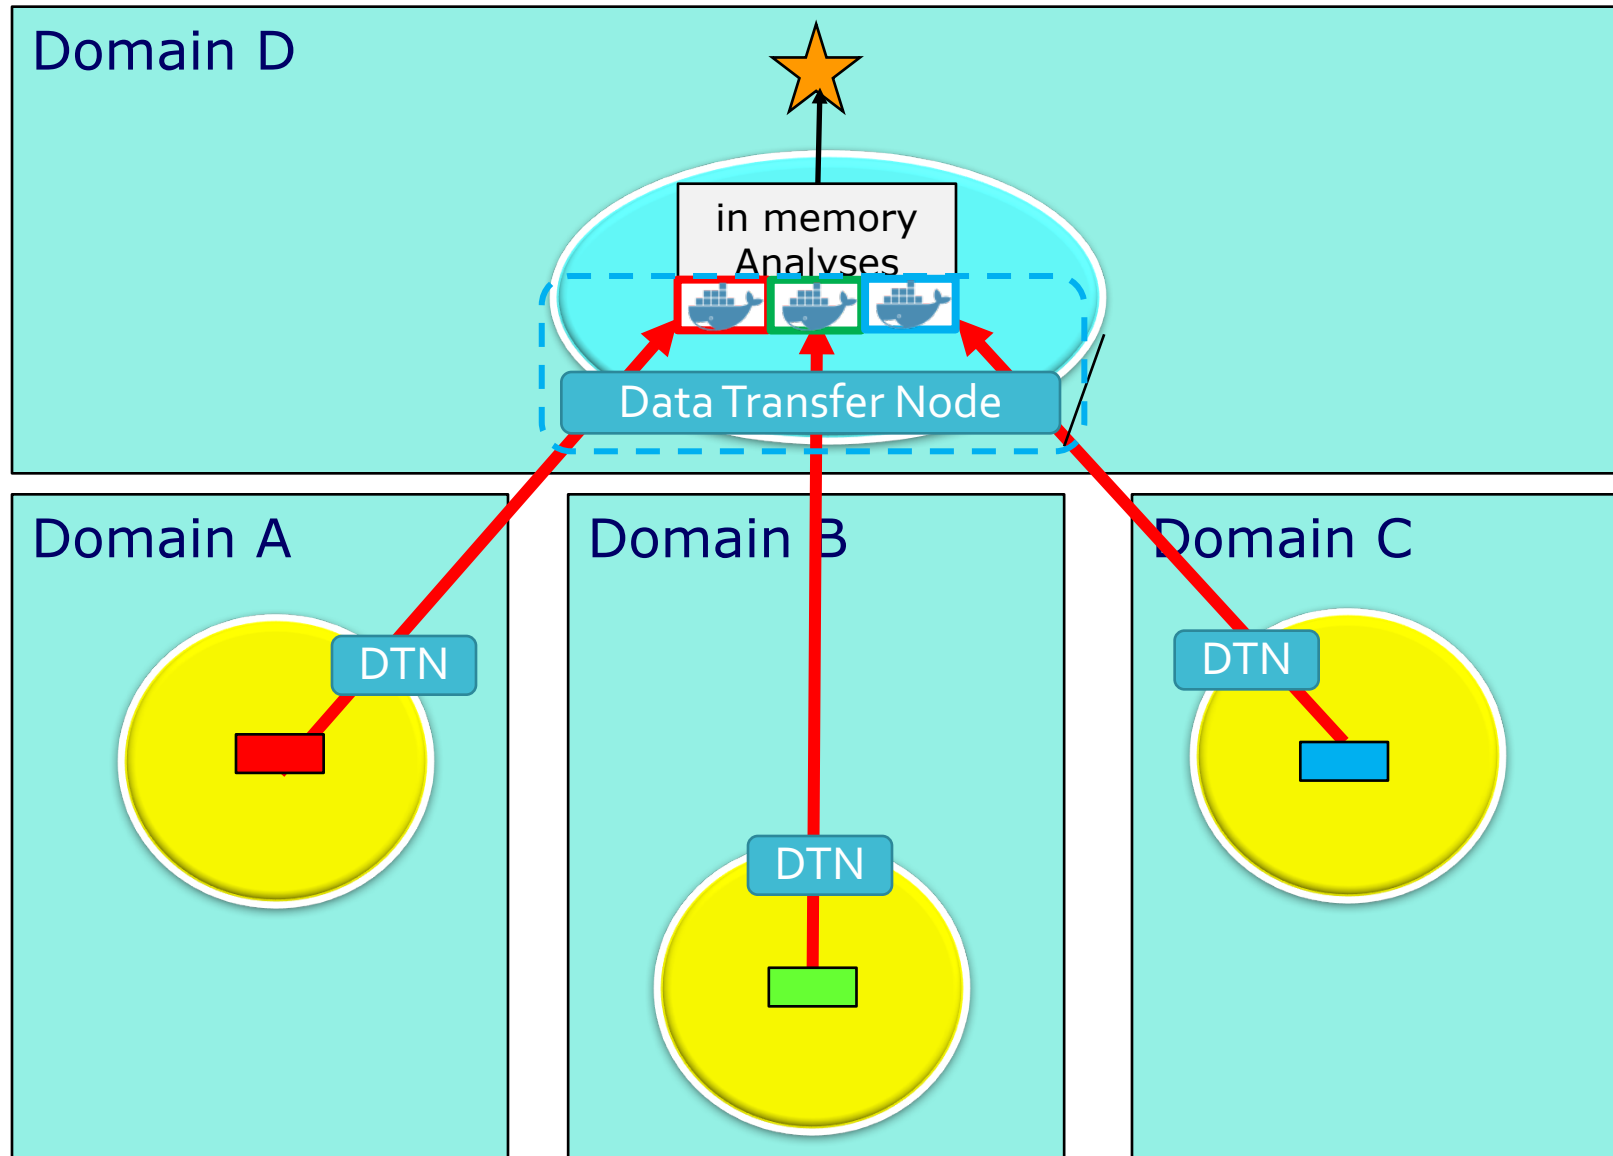

Domain = Autonomous Organization with own administration and enforcement

# Model: bring processing to the data.

# Model: "Bring Your Own Container" reading its data via HP links.

**Data Transfer Node** enables utilization of available high network bandwidth across distance

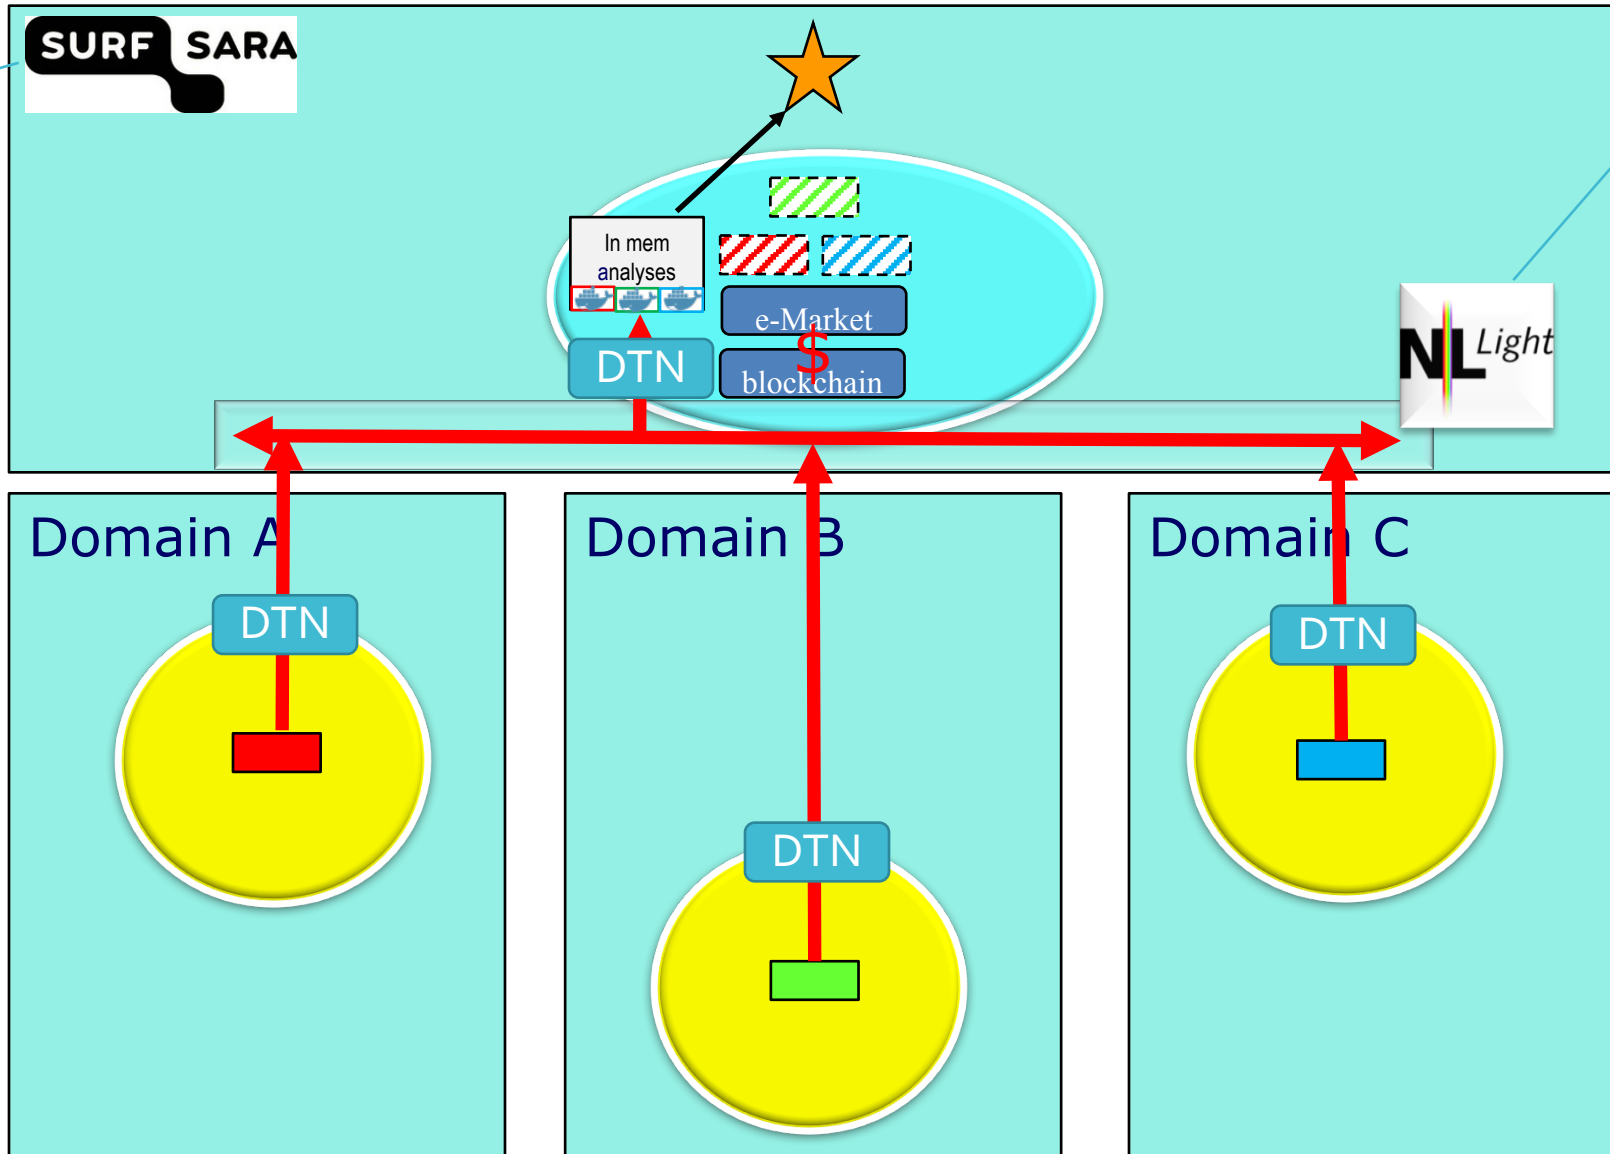

100 Gb/s provides +/- 20x transfer rate than a local SSD (5 Gb/s)

# A model implementing trading aspects in a hub.

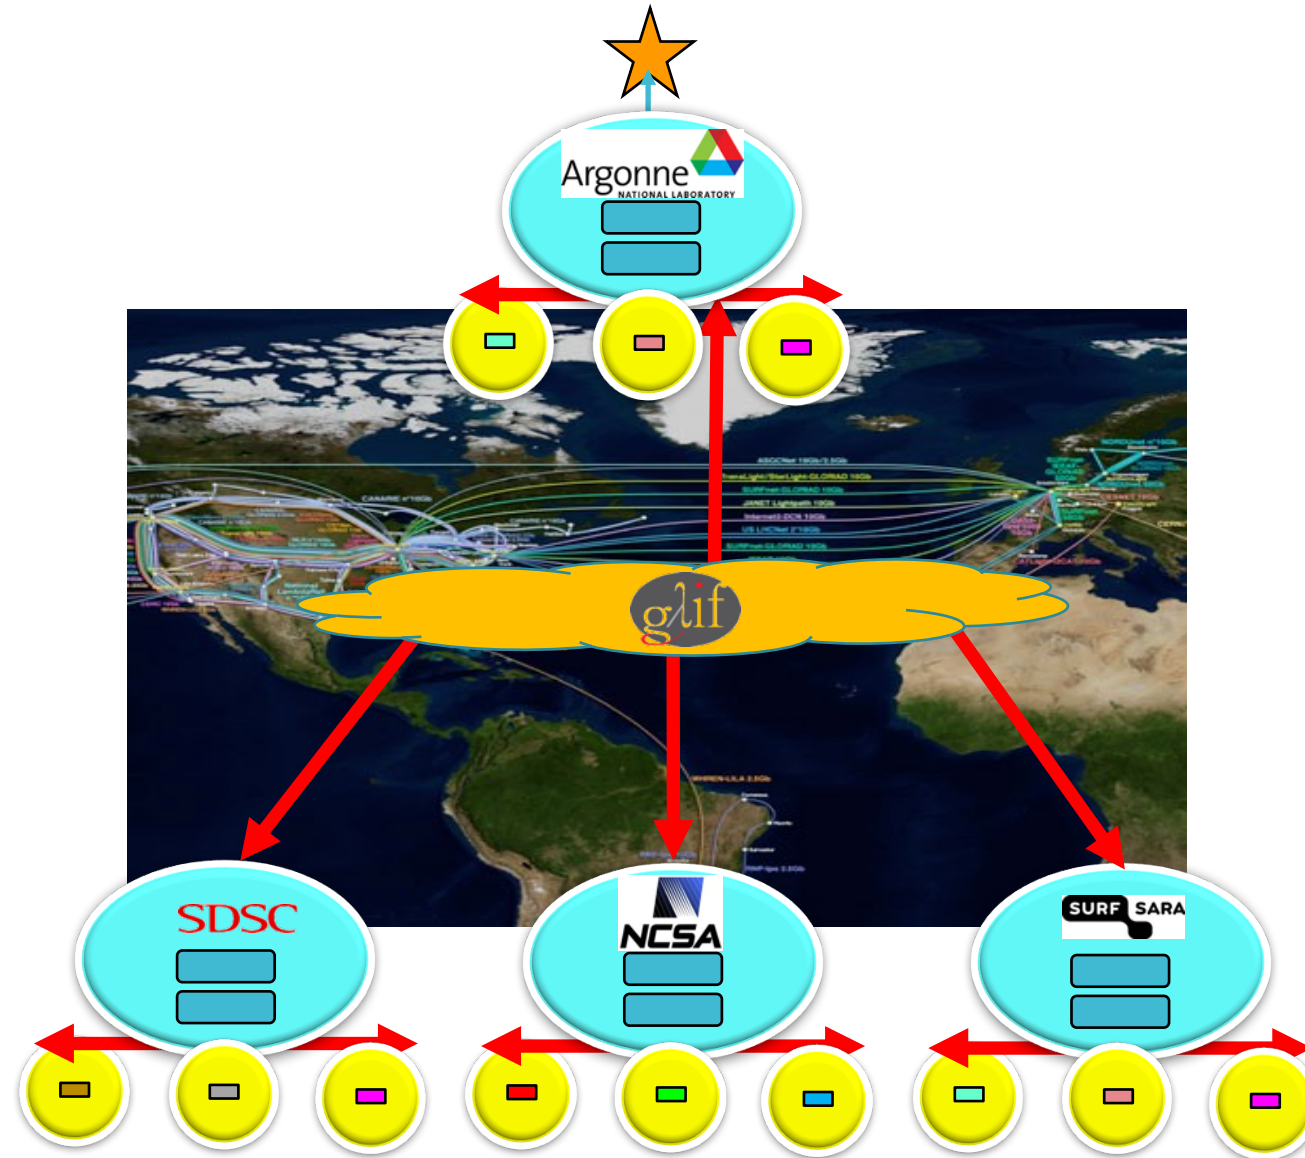

SURFsara  
Is the national  
supercomputing  
center in  
The Netherlands

Netherlight is  
the national  
optical network  
exchange providing  
access to  
a global research  
e-Infrastructure

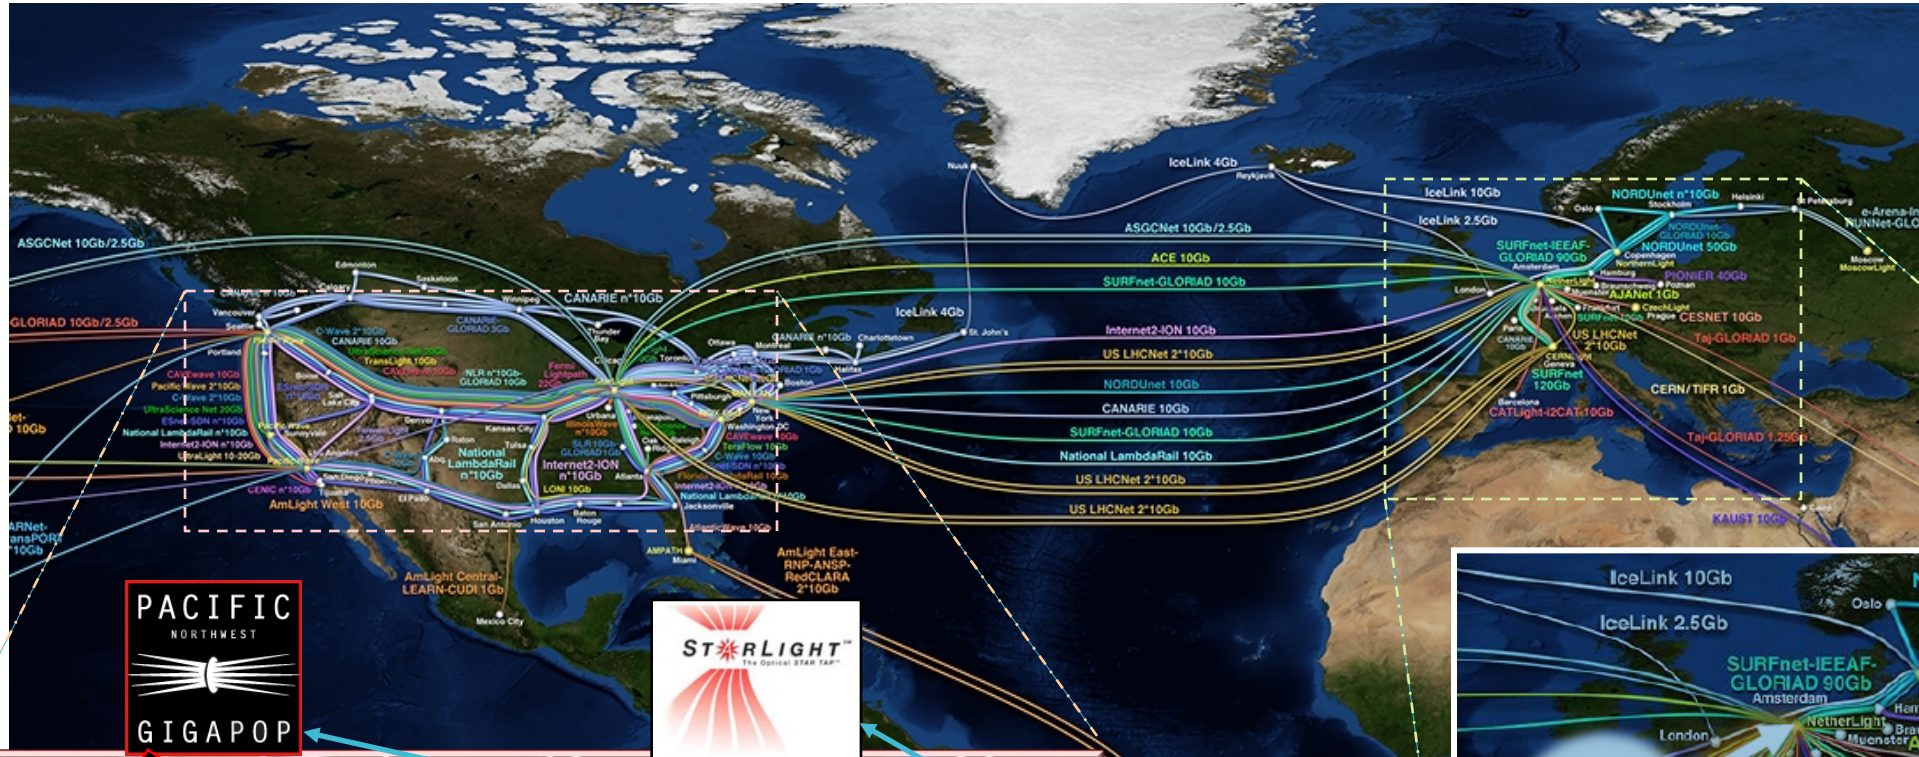

# Experiments at global scale using existing e-Infrastructure

# 2003: GLIF project initiated a Global Lightpath e-Infrastructure
