

Digital Data Markets: real time ICT for logistics

Data Logistics 4 Logistics Data (dl4ld)

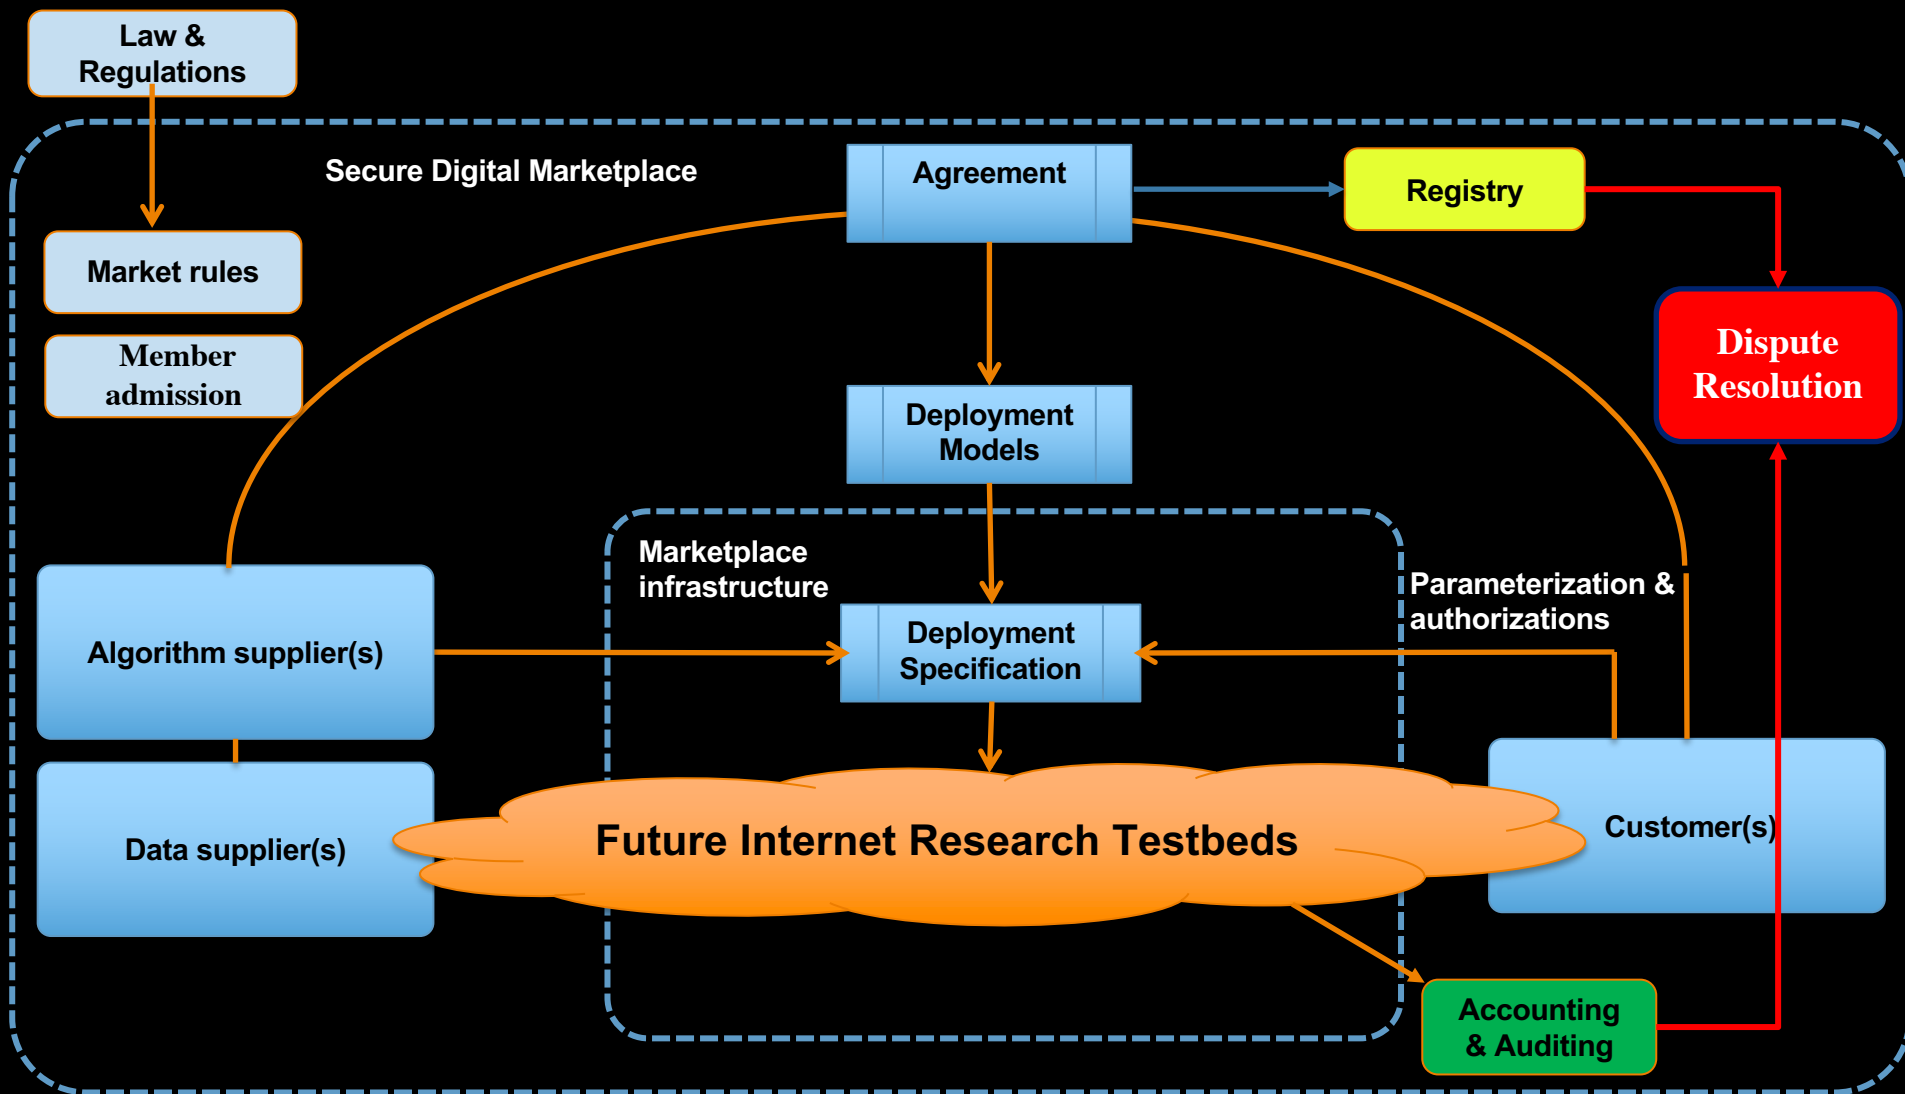

- PI's: prof.dr. Robert Meijer (TNO & UvA), prof.dr.ir. Cees de Laat (UvA)
- PL: dr.ir. Harrie Bastiaansen
- TNO: dr. Wout Hofman, dr. Ir. Anne Fleur van Veenstra, Simon Dalmolen MSc
- UvA: dr. Paola Grosso, prof.dr. Tom van Engers
- KLM & UvA: dr. ing. Leon Gommans
- KPMG & UvA: prof. dr. Sander Klous
- Thales Nederland: dr. Kees Nieuwenhuis
- CIENA: Rodney Wilson, Marc Lyonais
- ORACLE: Loek Hassing

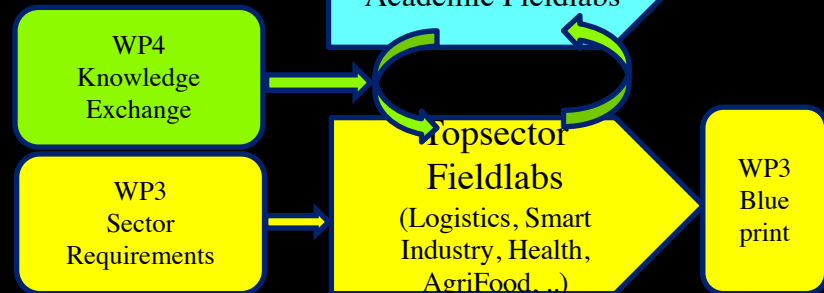

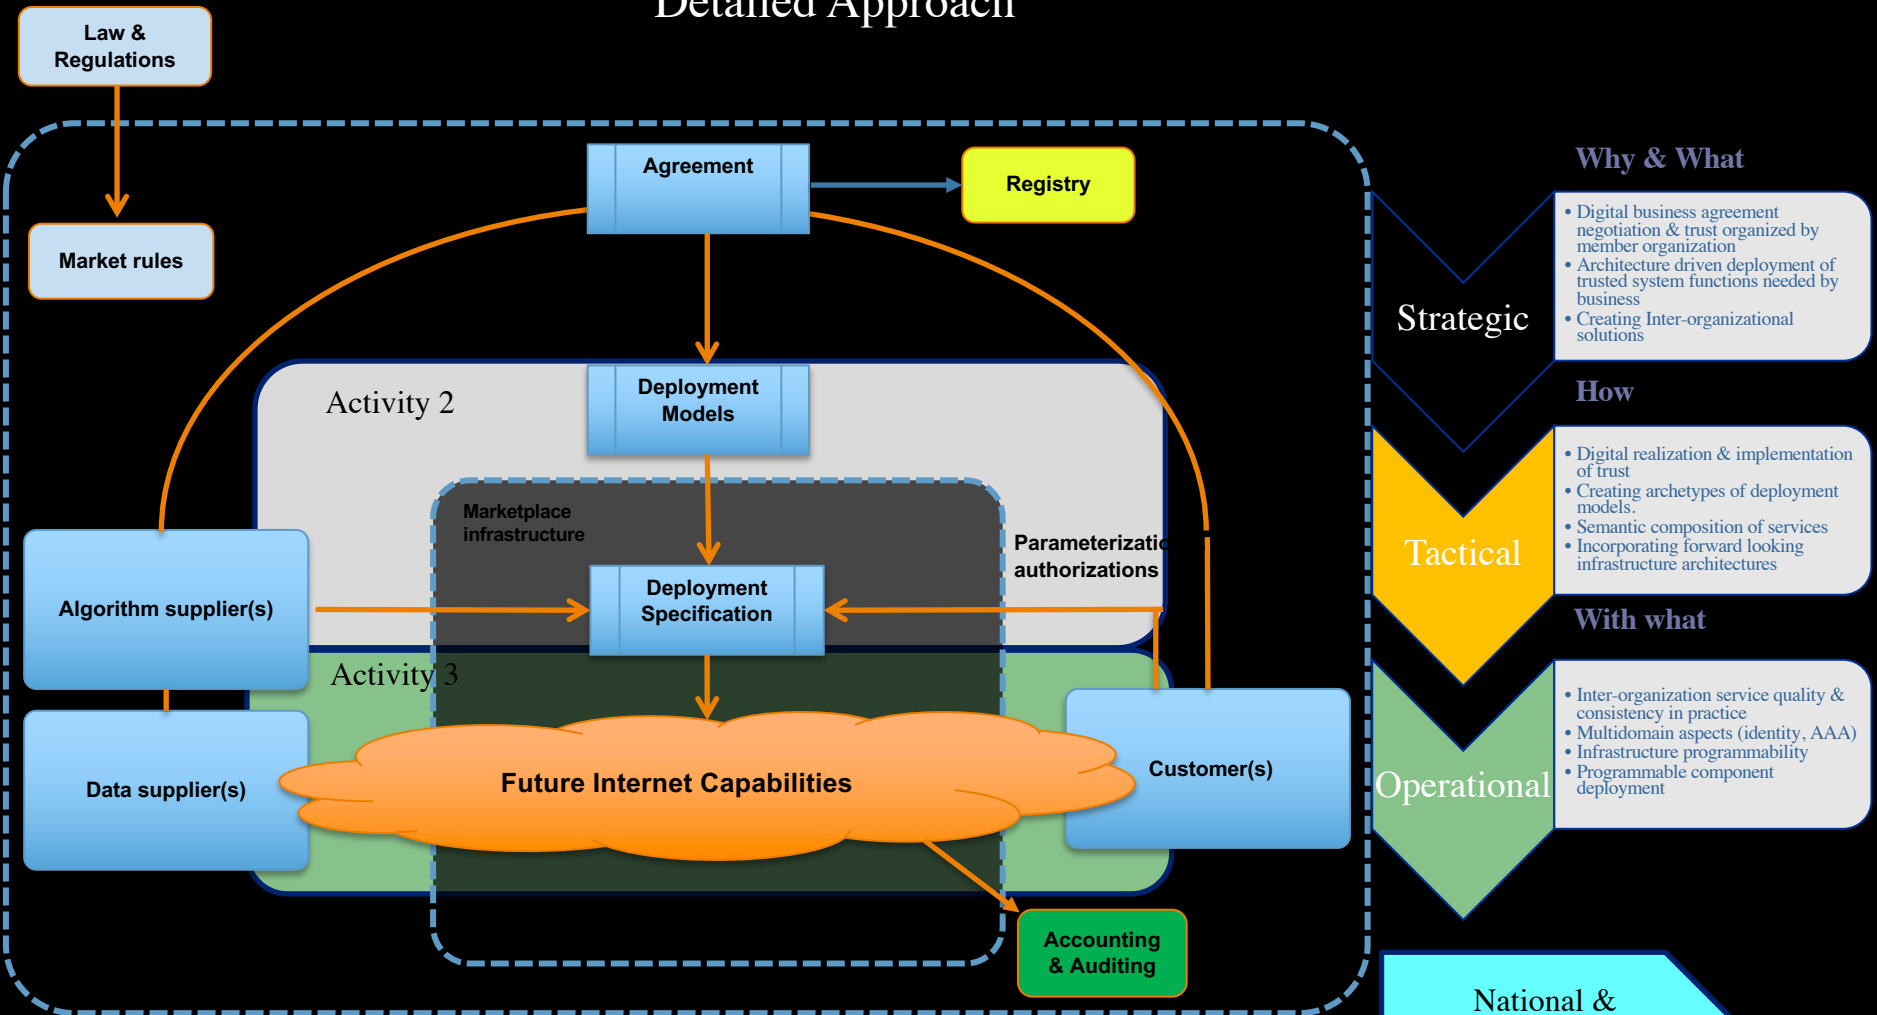

Main problem statement

- Organizations that normally compete have to bring data together to achieve a common goal!
- The shared data may be used for that goal but not for any other!
- Data may have to be processed in untrusted data centers.
 - How to enforce that using modern Cyber Infrastructure?
 - How to organize such alliances?
 - How to translate from strategic via tactical to operational level?
 - What are the different fundamental data infrastructure models to consider?

Secure Digital Market Place Research

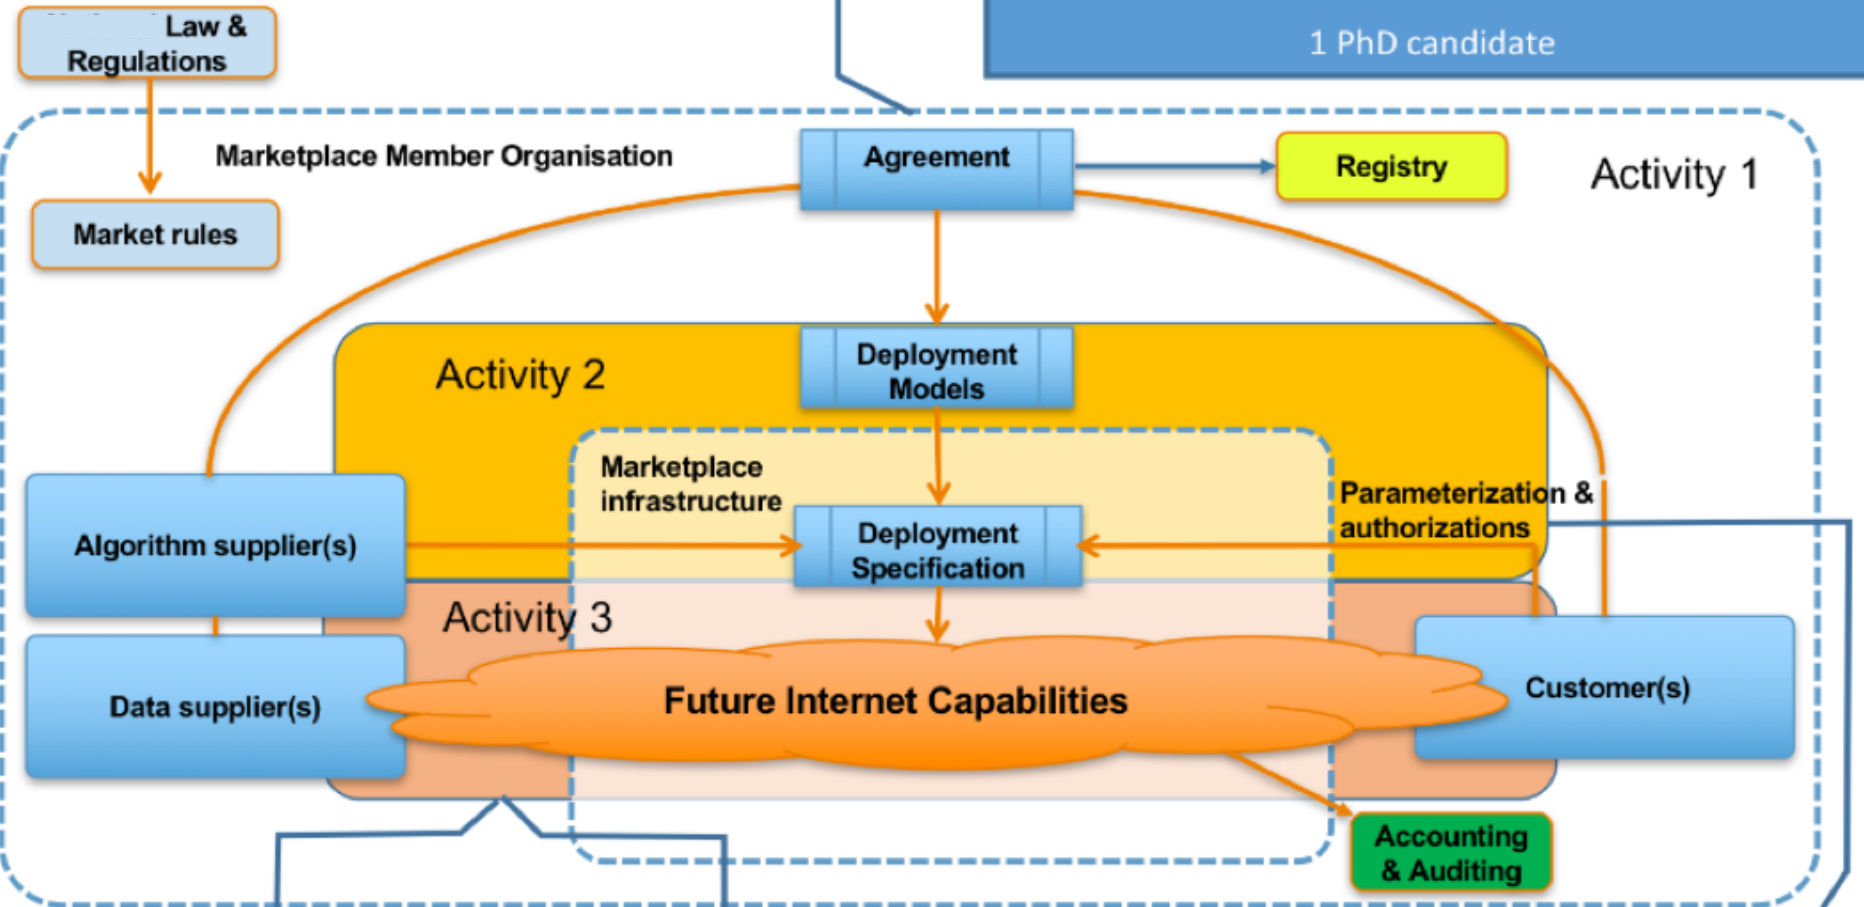

Detailed Approach

WP2 Research activity layout and staff involvement

CDL: Cees de Laat
 TVE: Tom van Engers
 SK: Sander Klous
 PG: Paola Grosso
 LG: Leon Gommans

TVE: Digital business agreement negotiation & trust.
 LG: Architecture driven deployment of trusted systems
 SK: Inter-organizational solution development
 1 PhD candidate

Amsterdam Datahub
 SK: Inter-organization service quality & consistency in practice
 1 PhD candidate

Openlab, KLM, Ciena, GLIF
 CDL: Multidomain aspects
 PG: Infra programmability
 LG: Programmable component deployment
 1 Prgmr 1 PhD candidate

TVE: Digital realization of trust
 LG: Creating archetypes of deployment models.
 PG: Semantic composition of services
 CDL: Forward looking architectures
 1 Postdoc researcher

The VM Turntable Demonstrator

The VMs that are live-migrated run an iterative search-refine-search workflow against data stored in different databases at the various locations. A user in San Diego gets hitless rendering of search progress as VMs spin around

Experiment outcomes

Note, this was in 2005 at SC and igrid2005!

We have demonstrated seamless, live migration of VMs over WAN

For this, we have realized a network service that

- Exhibits predictable behavior; tracks endpoints

- Flex bandwidth upon request by credited applications

- Doesn't require peak provisioning of network resources

Pipelining bounds the downtime in spite of high RTTs

- San Diego – Amsterdam, 1GE, RTT = 200 msec, downtime \leq 1 sec

- Back to back, 1GE, RTT = 0.2-0.5 msec, downtime = \sim 0.2 sec*

**Clark et al. NSDI 05 paper. Different workloads*

VM + Lightpaths across MAN/WAN are deemed a powerful and general alternative to RPC, GRAM approaches

We believe it's a representative instance of active cpu+data+net orchestration

CONCEPTS TO Generate ICT INFRASTRUCTURE

INTERNET FACTORIES

Software Defined Infrastructures

- Generation
- Adaptation
- Linking
- Globally

PHD 2014 UvA, Rudolf Strijkers, now at Swisscom

SCALING AND DISTRIBUTION OF ICT

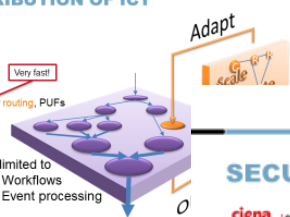

Scaling and distribution

1. Scale
2. Distribute
3. Best paths, free flows, GPU's for routing, PUFs
4. Globally, continuously

Very fast!

Is limited to

- Workflows
- Event processing

PHD 2016 UvA, Marc Makkes, now at VU

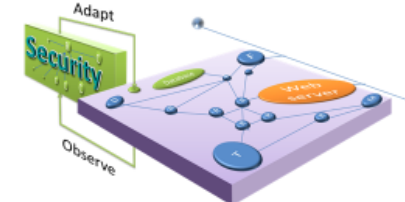

SECURITY ADAPTIVE RESPONSE NETWORKS

Security of ICT

- SARNET: Security adaptive response networks
- Virtual and real (fiber) networks

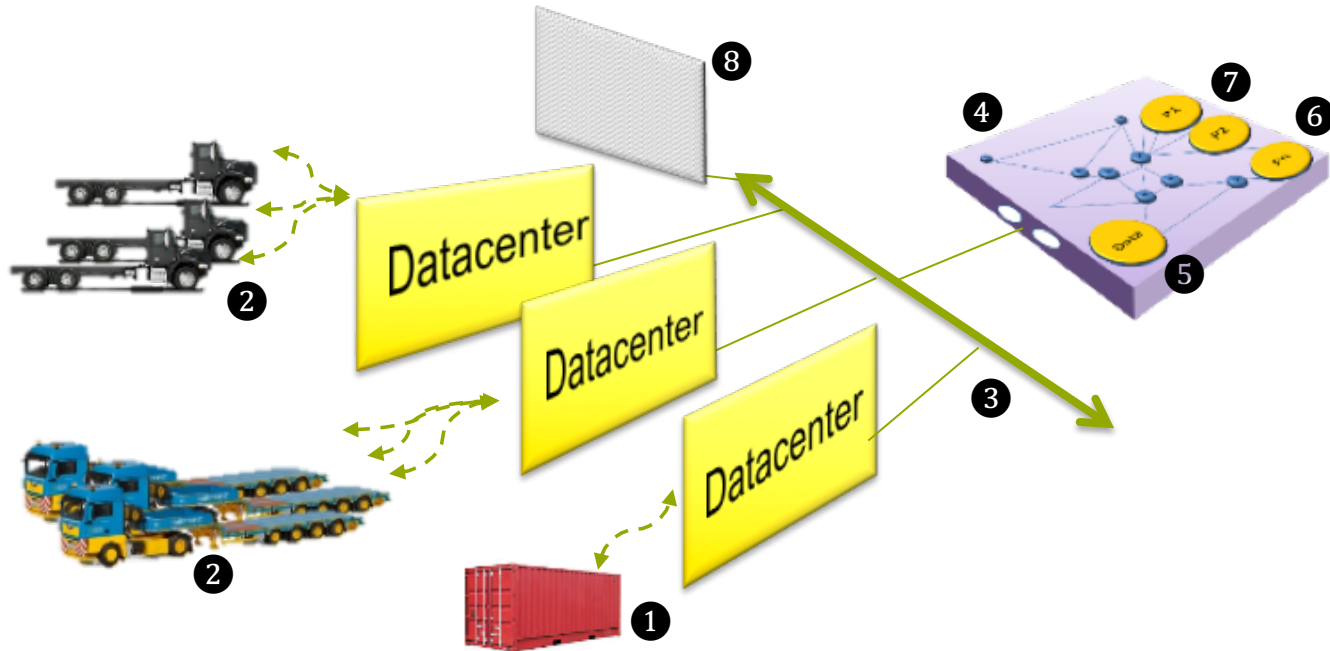

Adapt

Data Processing models

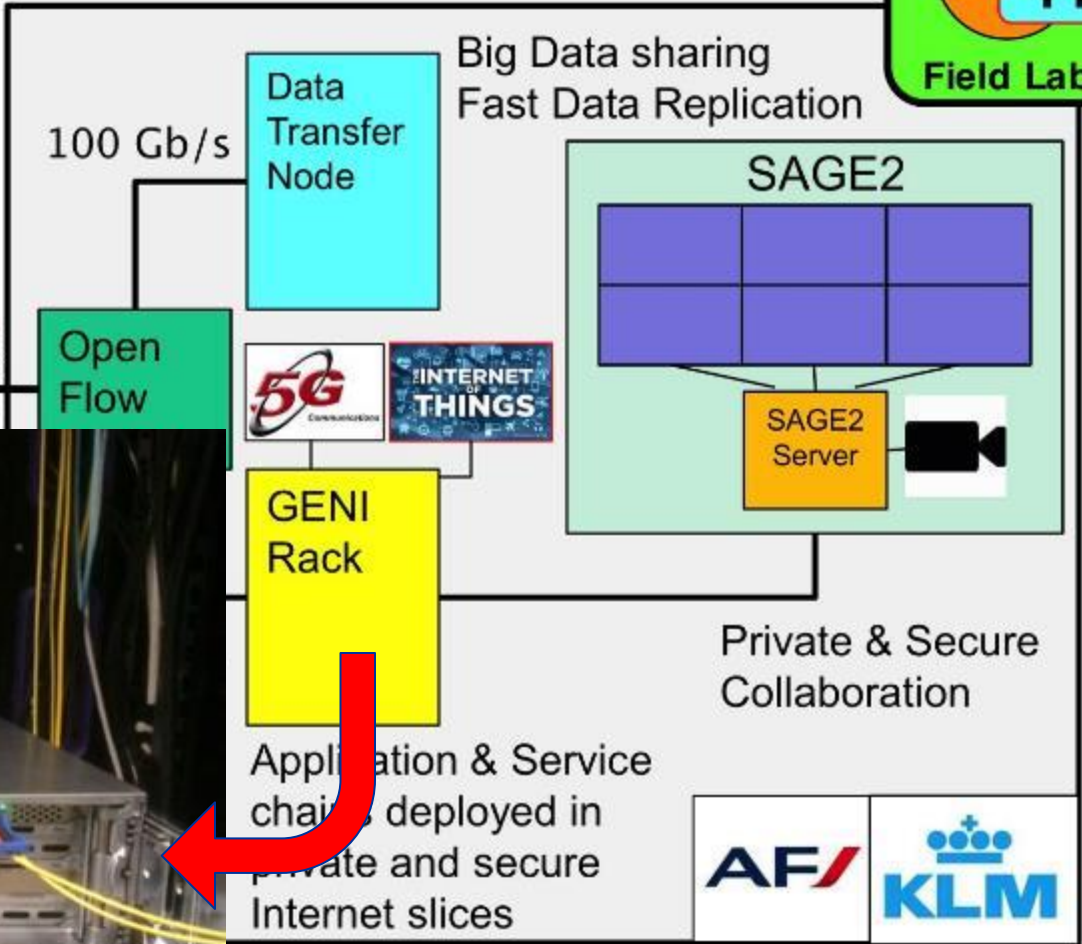

- Bring data to computing
- Bring computing to data
- Bring computing and data to (un)trusted third party
- A mix of all of the above
- Block chain to record what happened
- Block chain for data integrity
- Bring the owner of Data in control!
- Data owner policy + PEP technology

Ambition to put capabilities into fieldlab

Use Case on aircraft sensor Big Data

Approach

- Strategic:
 - Translate legislation into machine readable policy
 - Define data use policy
 - Trust evaluation models & metrics
- Tactical:
 - Map app given rules & policy & data and resources
 - Bring computing and data to (un)trusted third party
 - Resilience
- Operational:
 - TPM & Encryption schemes to protect & sign
 - Policy evaluation & docker implementations
 - Use VM and SDI/SDN technology to enforce
 - Block chain to record what happened (after the fact!)

Secure Policy Enforced Data Processing

- Bringing data and processing software from competing organisations together for common goal
- Docker with encryption, policy engine, certs/keys, blockchain and secure networking
- Data Docker (virtual encrypted hard drive)
- Compute Docker (protected application, signed algorithms)
- Visualization Docker (to visualize output)
