

Agile Network Management: The Impact of Automation and Orchestration

Prof. Sonja Filiposka, UKIM, GN5-1

How well are we performing today?

*Uptime report 2024

Network-related issues are the largest single cause of IT service outages

Could have been prevented with better management, processes and configuration

Significant, serious or severe outage cost more than \$100,000

Human error, whether directly or indirectly, contributes to a significant majority (2/3 – 4/5) of all downtime incidents

The Shift

**Rigid and
Manual
Processes**

**Difficulty
Scaling**

**Static and
Reactive**

Agility

Intelligence

Flexibility

Essential ingredient required:
Single Source of Truth

Translating intent...

Activating...

Network as you imagined it

Building a responsive and efficient network architecture

Task automation

Workflow automation

End-to-end orchestration

API-driven networks

Self-*
Zero-Touch

Tackling Issues

Lack of Trust

Need for a cultural shift

Heterogeneous Environments & Legacy Systems

Interoperability challenges

Limited capabilities and compatibility

Get up

Security risks

Increased attack surface

Graceful fail management

Robust error handling

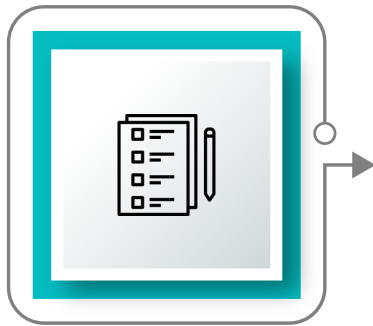

Proactive error detection

Automated recovery procedures

Moving Beyond A&O

The Journey Continues...

Foundation

- ✓ Automation
- ✓ Orchestration

Integrate

- ✓ Continuous integration
- ✓ Continuous Deployment

IaC

- ✓ Version control
- ✓ Consistency
- ✓ Rollback

Real-time

- ✓ Monitoring
- ✓ Logging
- ✓ Adaptability

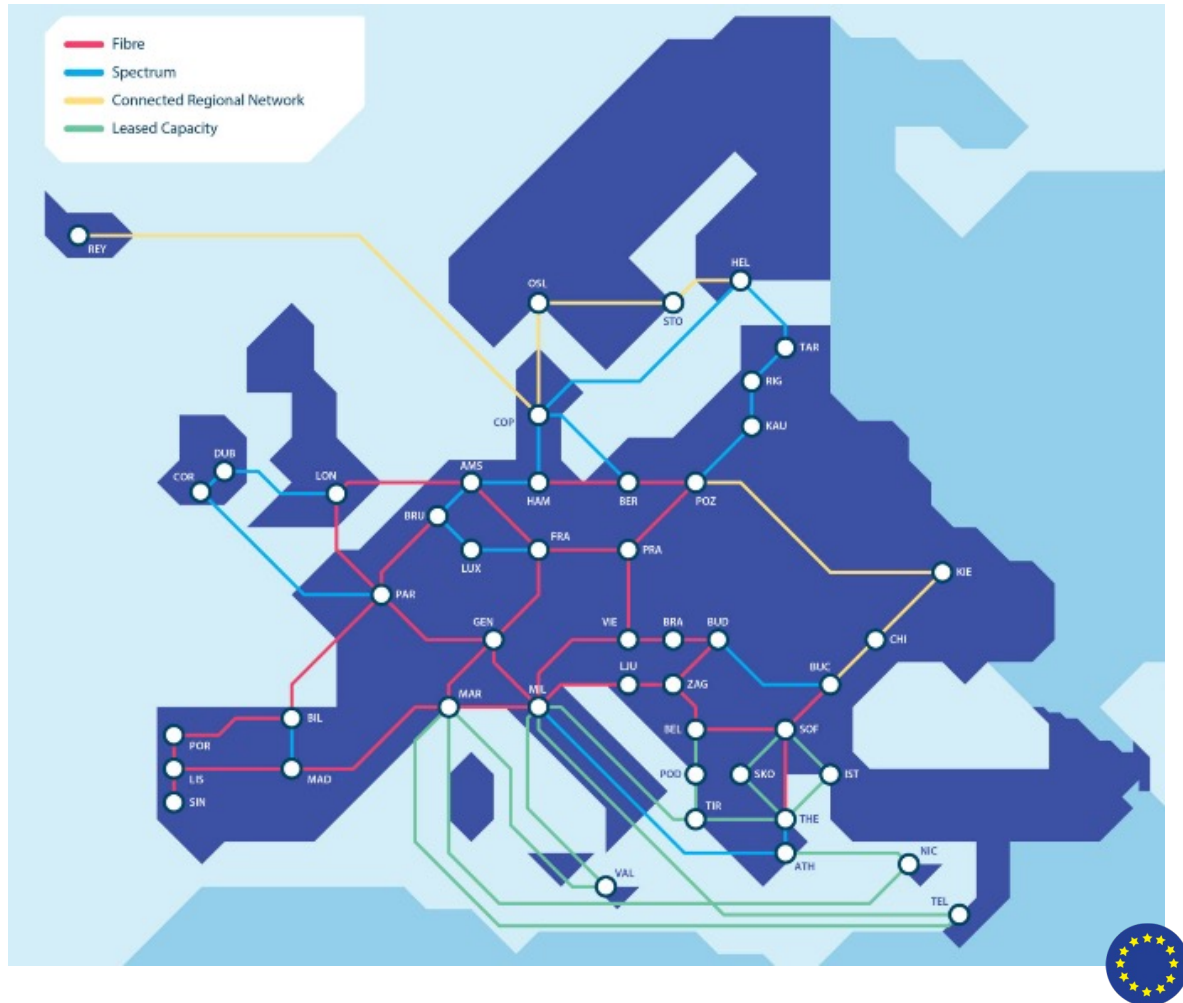

NetDevOps

- ✓ Network engineering
- ✓ Software development
- ✓ Network operations

The Case of GP4L

in the GÉANTs GN5-1 project

The GÉANT Network

- High bandwidth, high speed and highly resilient pan-European backbone
- Interconnecting European NRENs
- over 20 years of support for Europe's research and education communities

- 37 partners
- 500 contributors
- 50M users

The Global Platform for Lab (GP4L)

01

GP4L Experimental Testbed

A P4 distributed infrastructure for researchers to run network experiments

GP4L Digital Transformation Use Cases

Automation and orchestration solutions that underpin agile networks

02

03

GP4L Community Collaboration

Open discussion and collaboration on pilots

- Service Provisioning Pilot for PIONIER

GP4L Experimental Testbed

A programmable network infrastructure that can be used to run cutting-edge network experiments.

Heterogeneous Environments

Escape vendor lock-in

Single Source of Truth

Design reusable data models

Implementation Complexity and Validation

Test, test, go

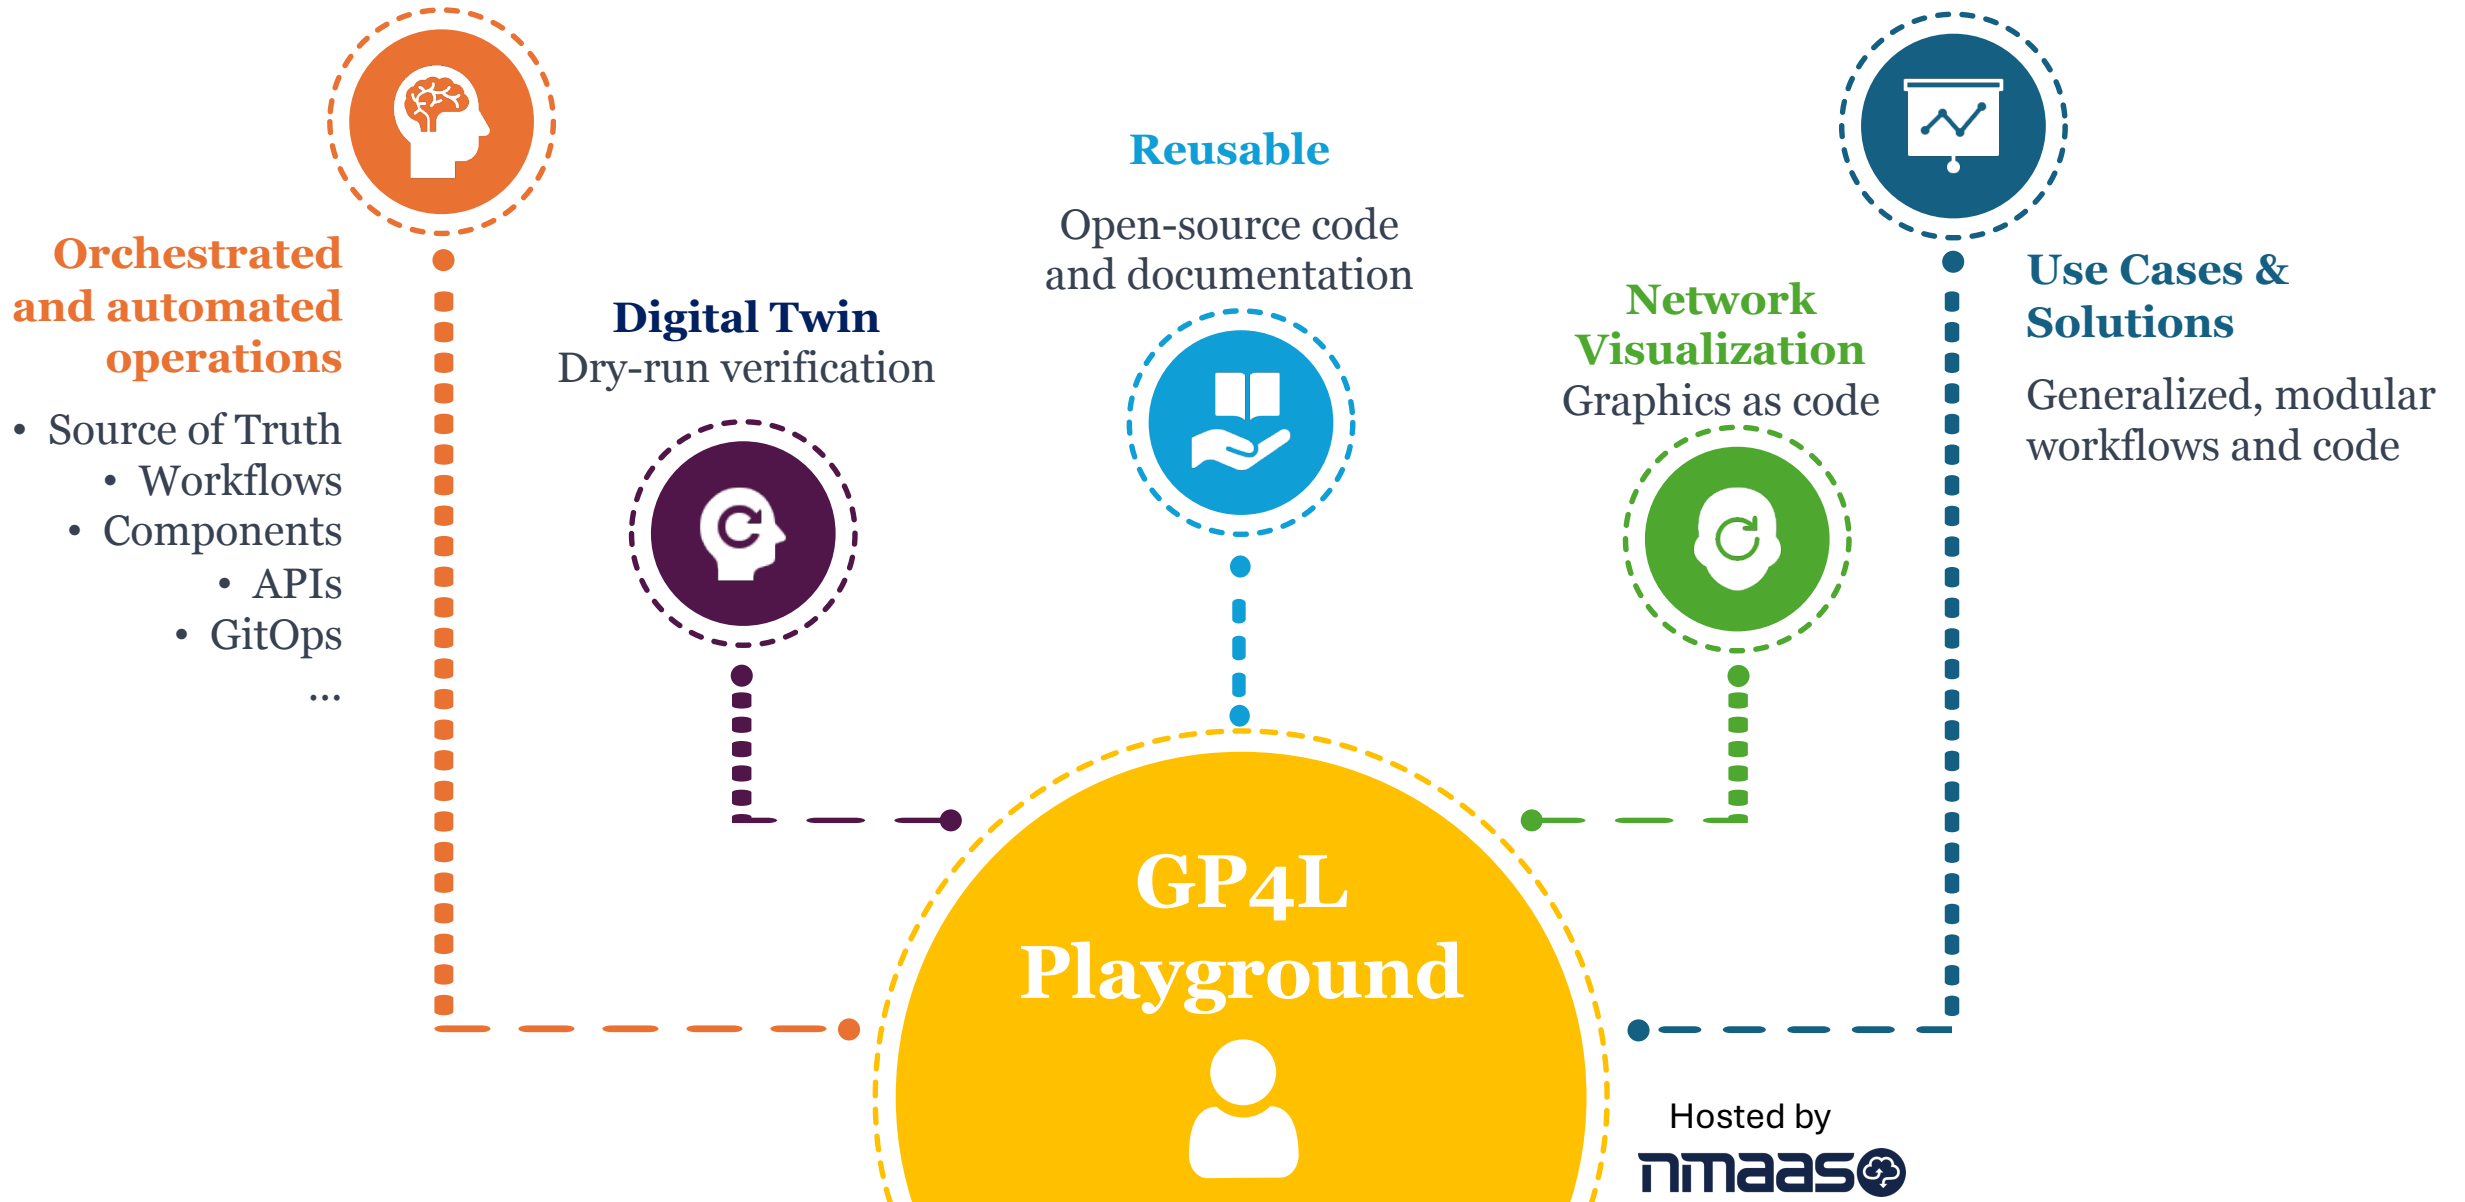

Standardization and Flexibility

Provide well-defined building pieces

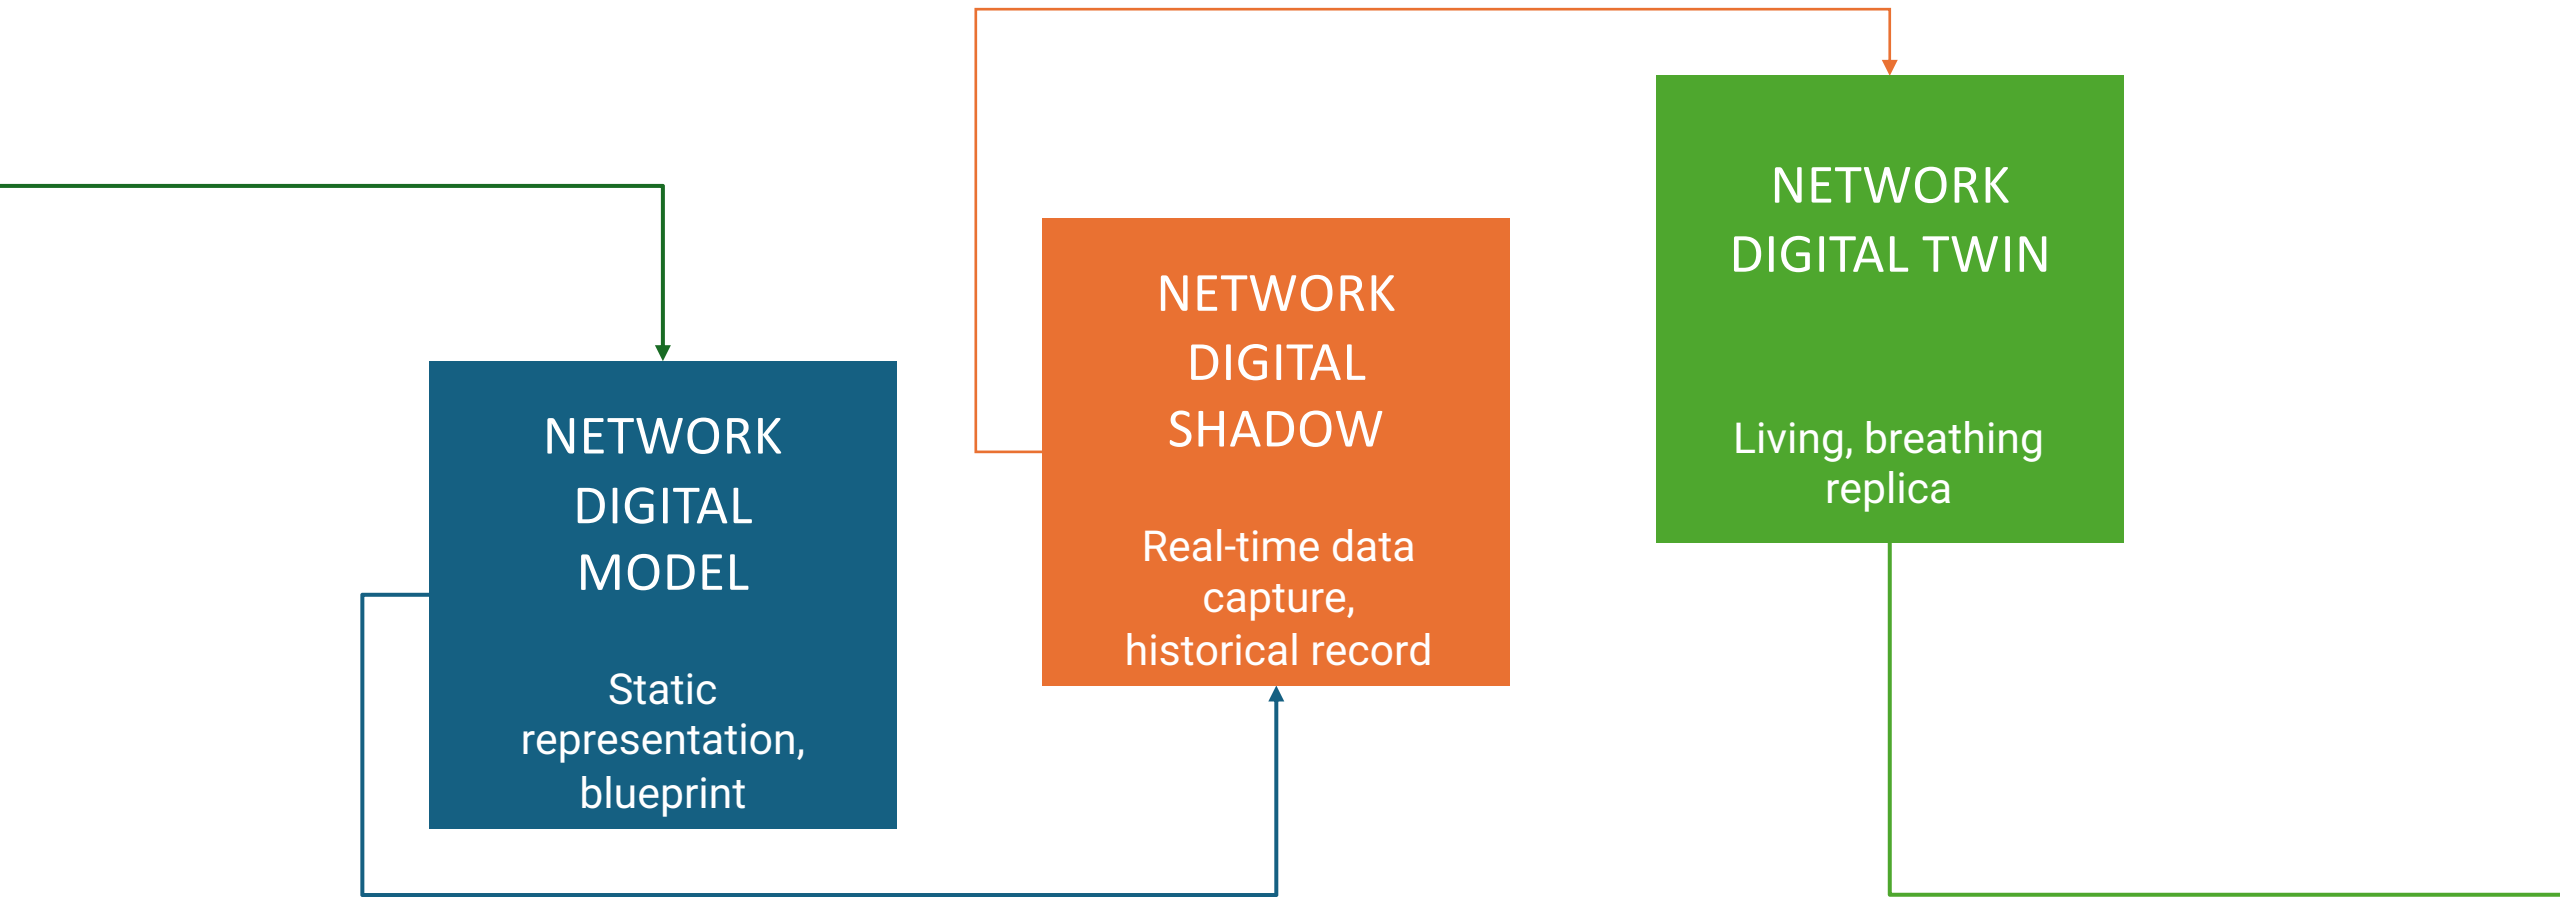

GP4L's Approach

Overcoming
common challenges
in the community

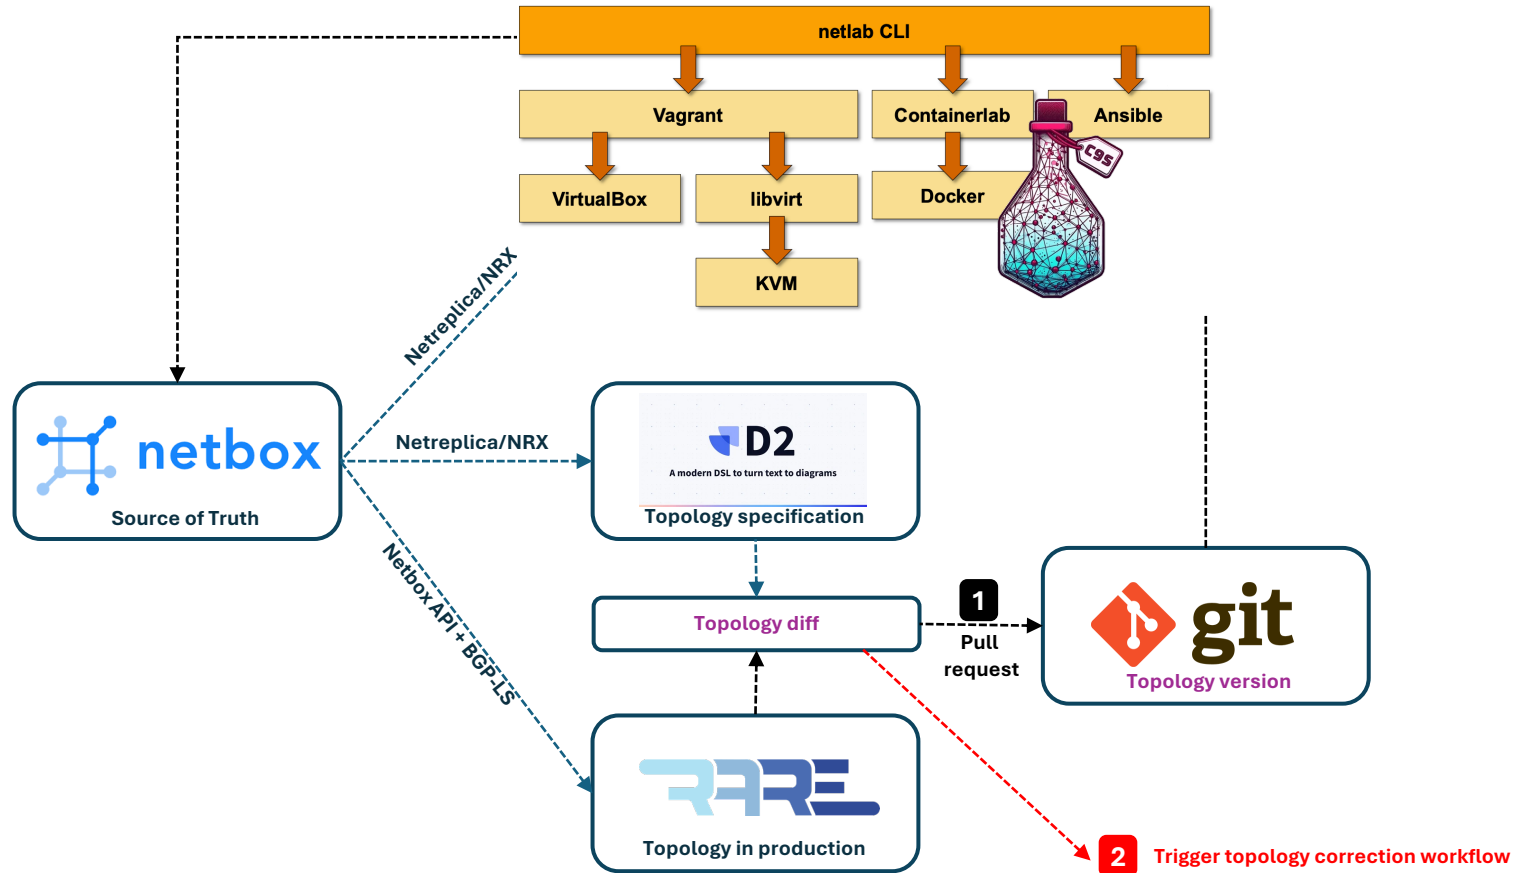

GP4L principles and activities

Towards a dynamic replica

Tools conception “around” the network ecosystem

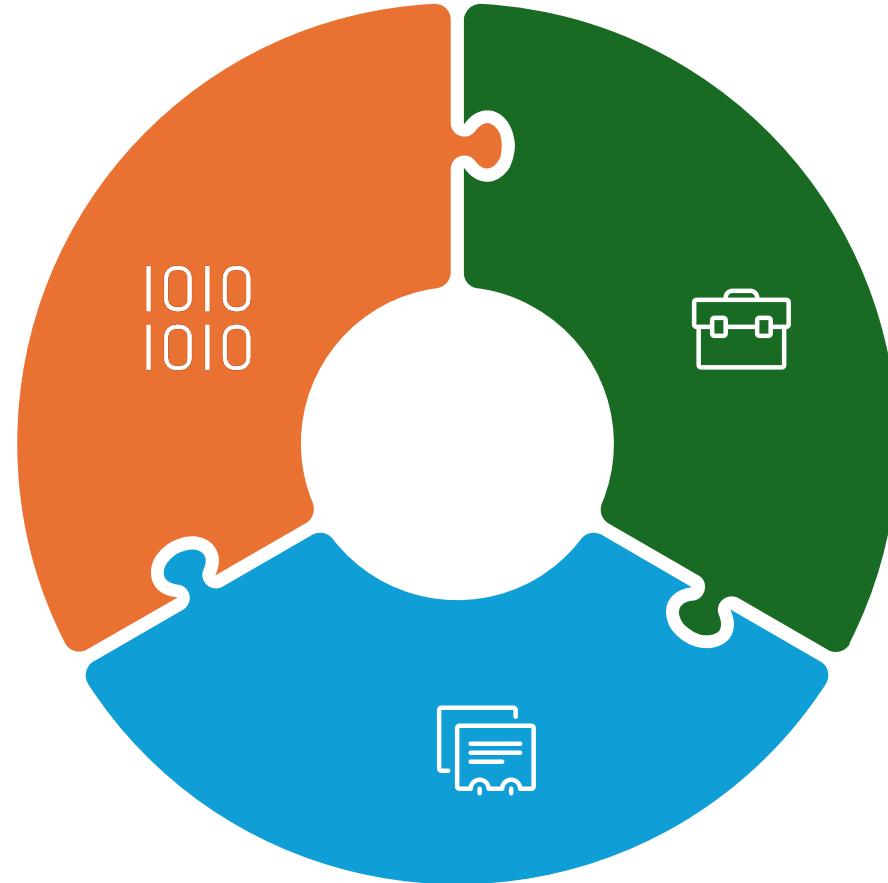

via GP4L Automation & Orchestration

Leaves something to be desired

High quality data

Powerful modelling

Correct up-to-date
information

Always available NOS

Mismatching

VMs vs containers

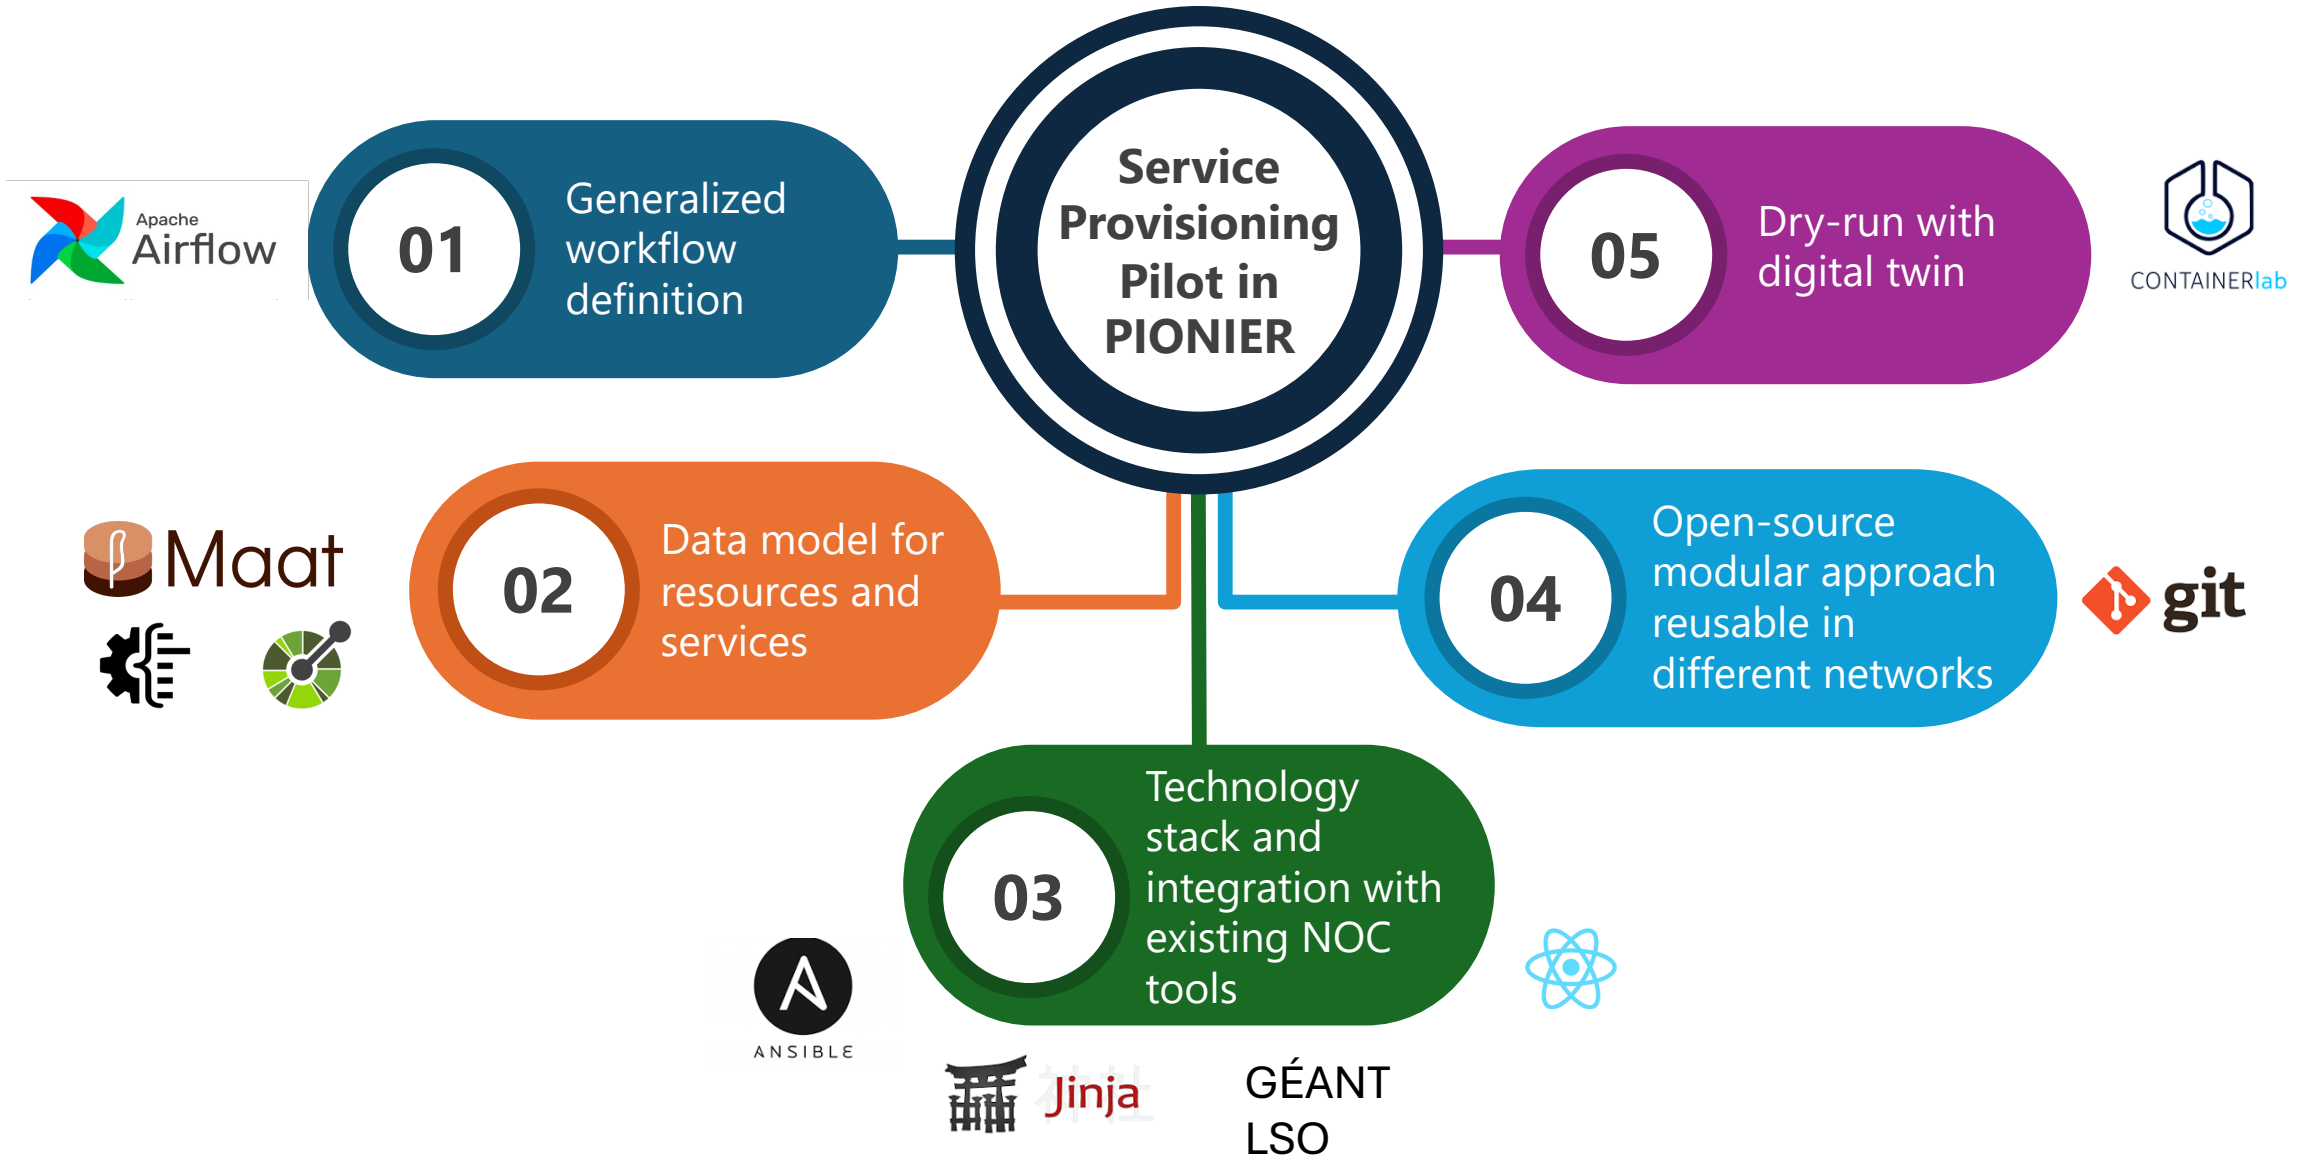

Identical replica

Unexpected hardware behavior

Full control plane

Scope of events

GP4L Joint Collaboration

Benefits of a Standardized Approach

System-Level Integration

- facilitates wider system integration
- network setup becomes part of a broader picture

Enhanced Collaboration and Reuse

- interoperable solutions allow components to be reused
- implementations are easily shared across organizations

Challenges and The Future

The Era of
Self-Everything

Strong Security
and Privacy

Real-Time
Operations
Adaptation

Operational
Reliability

Thank You
